

# ERPs Repeat The Lies We Tell Them

Operations are **organic**, ERPs are **rigid**. The gap in between is costing you **operational efficiency** and **quality** - every minute, every day. Raw materials, productivity or revenue, the **losses add up** and they grow as you scale.

Imagine a tool that bridges this gap - it **adapts** to your operations and is **ready to use** tomorrow morning. We have worked for five years with some of the best companies in India to build *exactly this tool*.

Powered by IoT and a ridiculously flexible mobile app, our cloud based **Operations Traceability Platform** is a low-code solution that

- Automates data collection and integrates with your existing ERP
- Eliminates SOP violations and empowers workers with instant feedback
- Ensures end-to-end traceability for your work-in-process, manufacturing assets, personnel, and output

**For any Operation, Anywhere**

Fruits & Veg at BigBasket & Zomato,

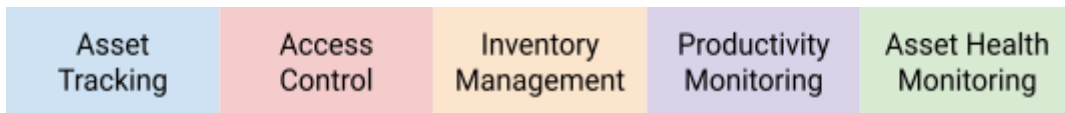

Copper & Aluminium at Vedanta, Petri

Dishes at Sun Pharma, Snacks at Go Desi,

Cold Chain at Flipkart, Shock Absorbers at

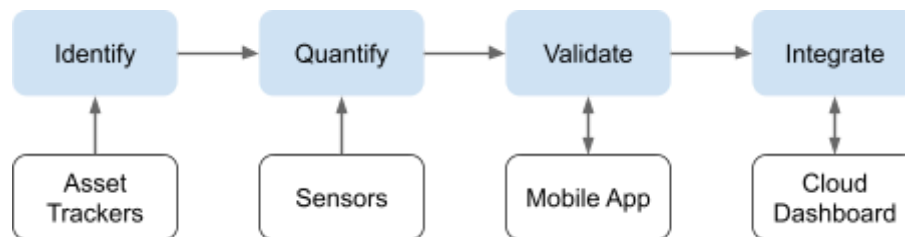

Gabriel, Groceries at Jumbotail

## What Problem Do You Want to Solve?

## How Does IoTReady Work?

It captures information that allows real-time “[5W2H](#)” analysis.

### What, Where, When

We give each asset a unique, tamper-proof **Identity**. Our platform works seamlessly with indoor and outdoor wireless tracking solutions: QR, UHF RFID, BLE, NFC, UWB and GPS.

### How Much

In addition, our asset trackers can collect **Quantity** via sensor integrations: weight, temperature, vibration, distance, others.

### Who, How, Why

Our mobile app adapts to your SOPs and captures activity **Context**. With real-time feedback from and to your ground team, you always have a 360° view of your operations.

## Results On Day 1

1. Assign unique IDs to your assets from our pilot kit containing QR codes and RFID tags. ~30 minutes.
2. Configure 1 high-value activity, e.g. goods received, asset tracking. ~5 minutes.
3. Add validations incrementally while running operations. ~1-4 hours.
4. Use the built-in Business Intelligence tool to gather insights. ~15 minutes.
5. Integrate with your ERP via APIs. ~1 hour.
6. With IoTReady, give your ERP systems the truth.
7. Our solutions experts work with you from start to finish.
